

Welded cable ladders

Stably welded, extremely robust

Pure cable ladder competence from OBO

Electricians have placed their trust in OBO Bettermann cable ladders for decades. The portfolio ranges from riveted to welded cable ladders, which are used in millions of industrial systems throughout the world. Customers can always rely on the robust and easy-to-mount structure of each individual component.

Welded cable ladders

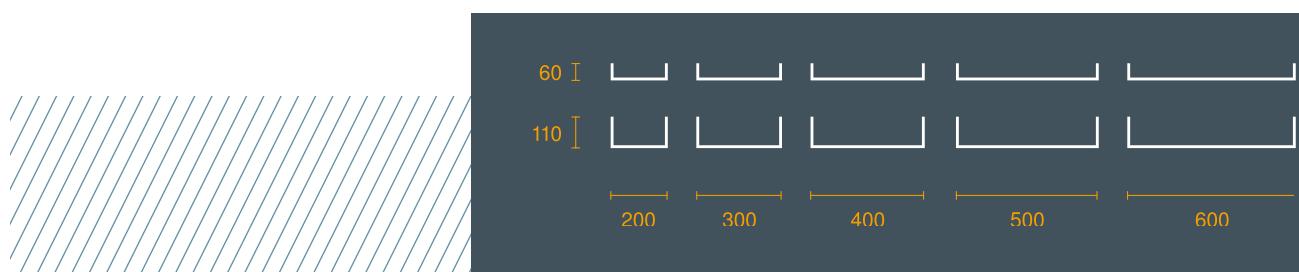

OBO is continuously thinking ahead for its customers and has now reinvented and perfected the welded cable ladder. Thanks to the special shape and innovative rung, the welded cable ladder can offer special technical properties and benefits during mounting. The range of materials is broad: strip and hot-dip galvanised, A2 and A4 rustproof stainless steel and powder-coated versions are available.

A4

High-resistance connection, sufficient installation space

The highest stability, combined with the optimum space for vertical and horizontal cable assignment – this was our target in developing the new generation of welded cable ladders. The result is certainly impressive.

Highly resistant

The rungs are welded to the lower flange. The firmly bonded connection is highly resistant and can also withstand the greatest loads. The flush connection of the rung with lower flange guarantees optimum force transmission.

Practical covers

For horizontal installation, a cover on top protects the cables against dust and dirt.

USE □ HAR □ H07 RN-F 5G2.5

Volume

The special position of the rung offers an additional benefit: Thanks to the welding of the rung to the lower flange, the cable ladder offers additional installation space for cables.

Tested

Stability and reliable corrosion protection – even at the welding points. Both properties were tested in comprehensive testing in OBO's own BET Test Centre. Our cable ladders had no trouble in withstanding the salt spray and load tests.

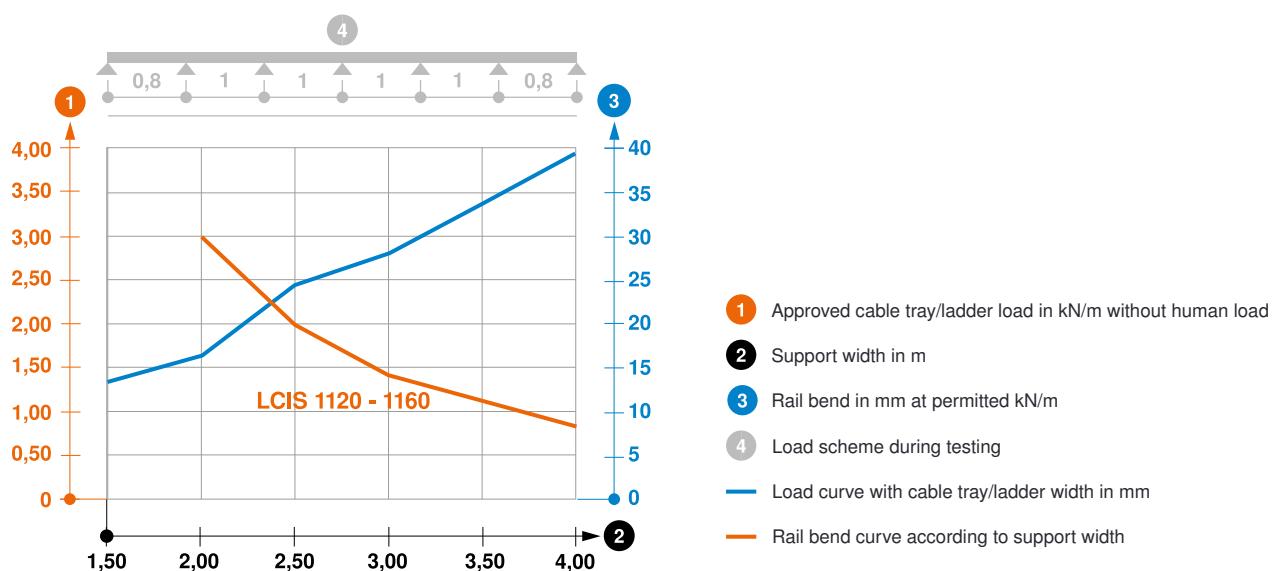

LCIS cable ladder

Welded, light-duty cable ladder for the horizontal routing of cables according to DIN EN 61537. The light-duty cable ladder can be used in indoor and outdoor areas and is suitable for wall and ceiling mounting on support systems. Additional properties: screw connection, perforated and reinforced C-profile rung, assignable on both sides, with continuous rail perforation for connector and accessory mounting.

- Available in two different heights: 60 mm and 110 mm
- Available in lengths of up to 6 m
- Selection of various surfaces

Load diagram, cable ladder, type LCIS 110

Height	Widths	Surfaces	Lengths
60 mm	200–600 mm	FS, FT, A2, A4	3 m, 6 m
110 mm	200–600 mm	FT	6 m

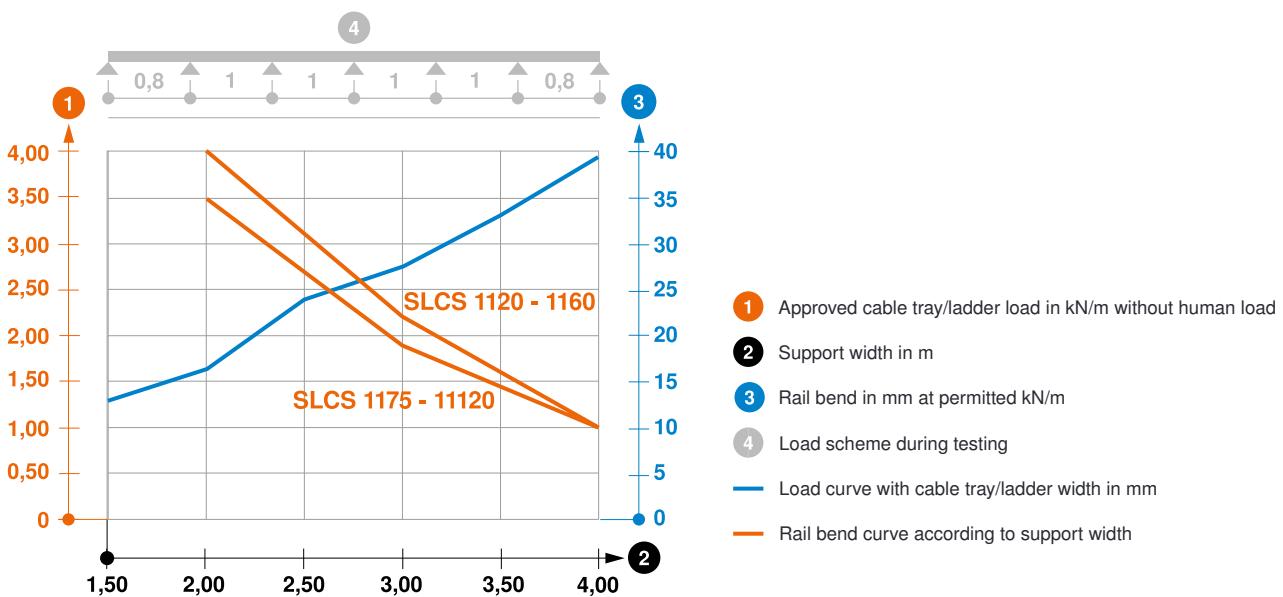

SLCS cable ladder

Welded, heavy-duty cable ladder for the horizontal routing of cables according to DIN EN 61537. The heavy-duty cable ladder can be used in indoor and outdoor areas and is suitable for wall and ceiling mounting on support systems. Additional properties: screw connection, unperforated and reinforced C-profile rung, assignable on both sides, with continuous rail perforation for connector and accessory mounting.

- Up to 400 kg per metre
- Available in widths of up to 1,200 mm
- Additionally with particularly high corrosion protection in FTSO

Load diagram, cable ladder, type SLCS 110

Height	Widths	Surfaces	Lengths
110 mm	200–1,200 mm	FT, FTSO	3 m

Innovative rung

OBO has reinvented the rung and had it patented. Its well-thought-out hole pattern is perfectly tailored to the requirements of all kinds of industrial installations. The special feature: The rungs can be filled on both sides. This means that the ladder can be equipped flexibly whilst its carrying capacity can be used to the optimum. This means that smaller ladder widths are often sufficient during mounting.

Rung – reinvented

The double-sided filling of the rungs allows flexible installation and offers the maximum of installation space. The rungs are perfectly matched to the fastening elements (e.g. to the clamp clip, type 2056).

One rung for every even-tuality

The innovative rung is used in the entire cable ladder system up to a width of 600 mm.

Perfectly matched wall mounting

The welded cable ladder offers major benefits in horizontal and freestanding mounting. Even with wall mounting, the cable ladder presents a practical installation advantage.

Room to breathe

During wall mounting, the well-thought-out construction of the cable ladders offers a distance of approx. 5 millimetres between the rung and the wall. This provides space during the installation.

USE ▷ HAR ▷ H07 RN-F

Wide range of clamp clips

With a wide range of variants and sizes, OBO can offer the right clamp clip for any installation situation. An example: In areas with special requirements, such as those in industrial environments, clamp clips with a metal trough can be used.

Perfectly matched fittings

The fittings of the cable ladder system are the next logical addition to the section material. They are also machined with welded rungs and are supplied in the materials and surfaces of the cable ladders.

Continuous perforation

Thanks to the innovative rung, the fittings can also be filled on both sides. The continuous perforation allows the use of a wide range of OBO clamp clips.

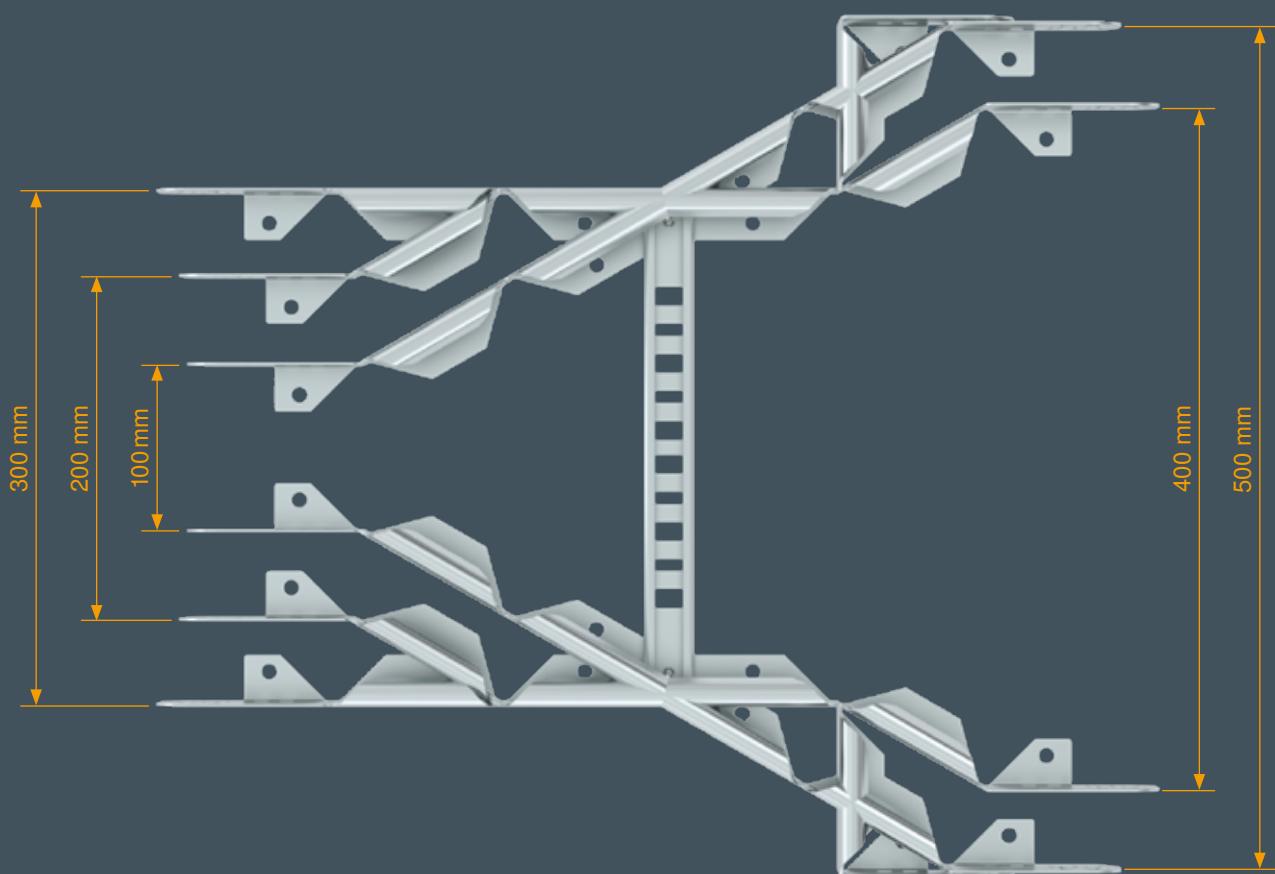

Simple handling

An optimised standard radius of 300 mm instead of the previous 490 mm makes the fittings more compact and thus easier to use.

One for all – the multifunctional connector

With the component from OBO, cable ladders can be simply interconnected, whilst also flexibly implementing changes in shape and direction.

Extraordinarily flexible

The side rails of the multifunctional connector can be adjusted to any angle and any installation situation, so that both symmetrical and asymmetrical reductions are possible.

Symmetrical reduction

Asymmetrical reduction

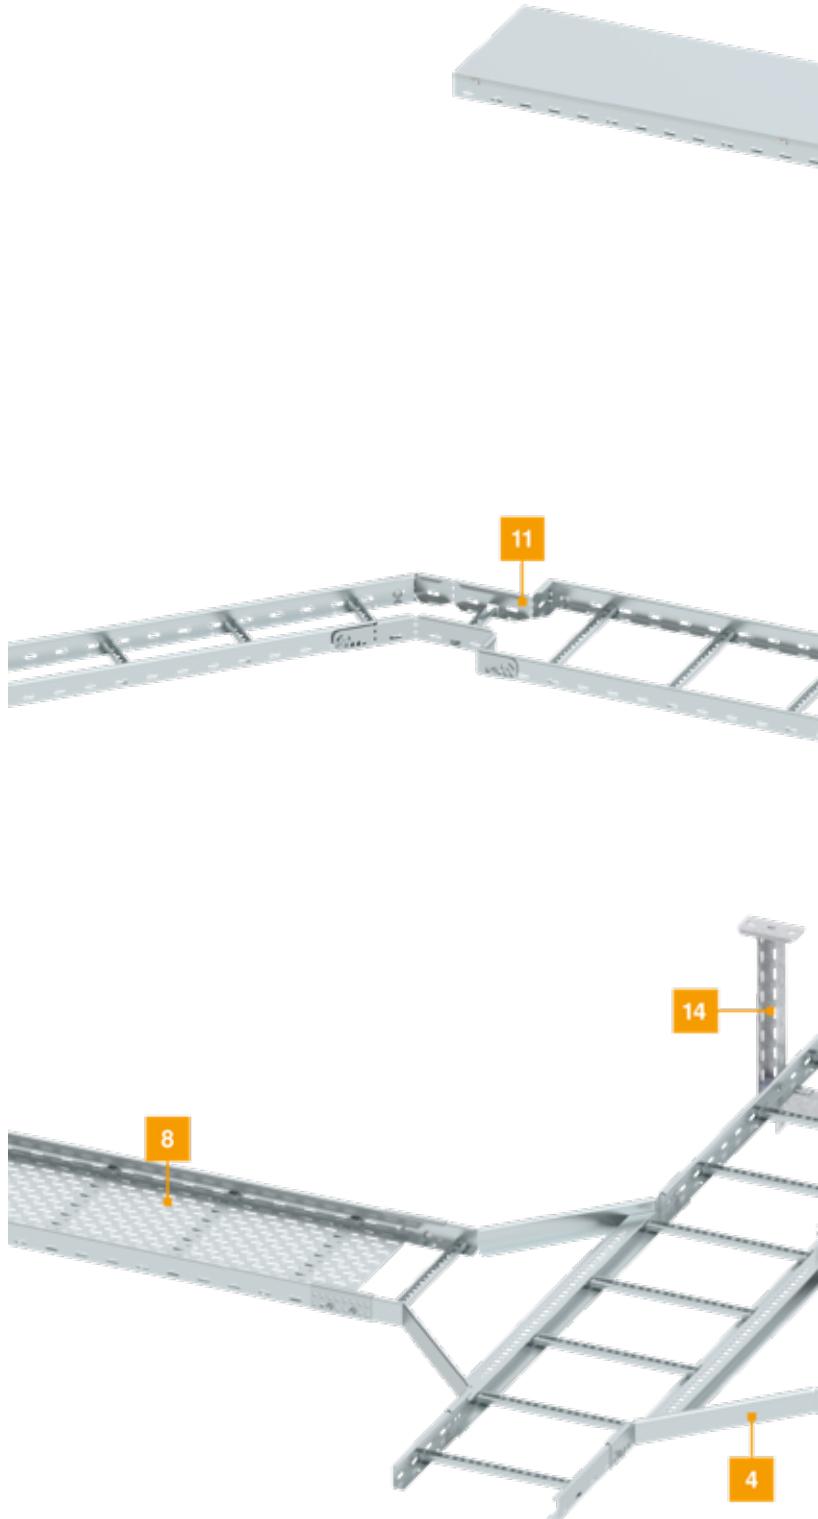

Bend 0–60°

- 12 Barrier strip
- 13 Pendulum suspension with threaded rods
- 14 Suspension with U supports
- 15 Suspended support + bracket
- 16 Centre suspension of threaded rod

Tested safety

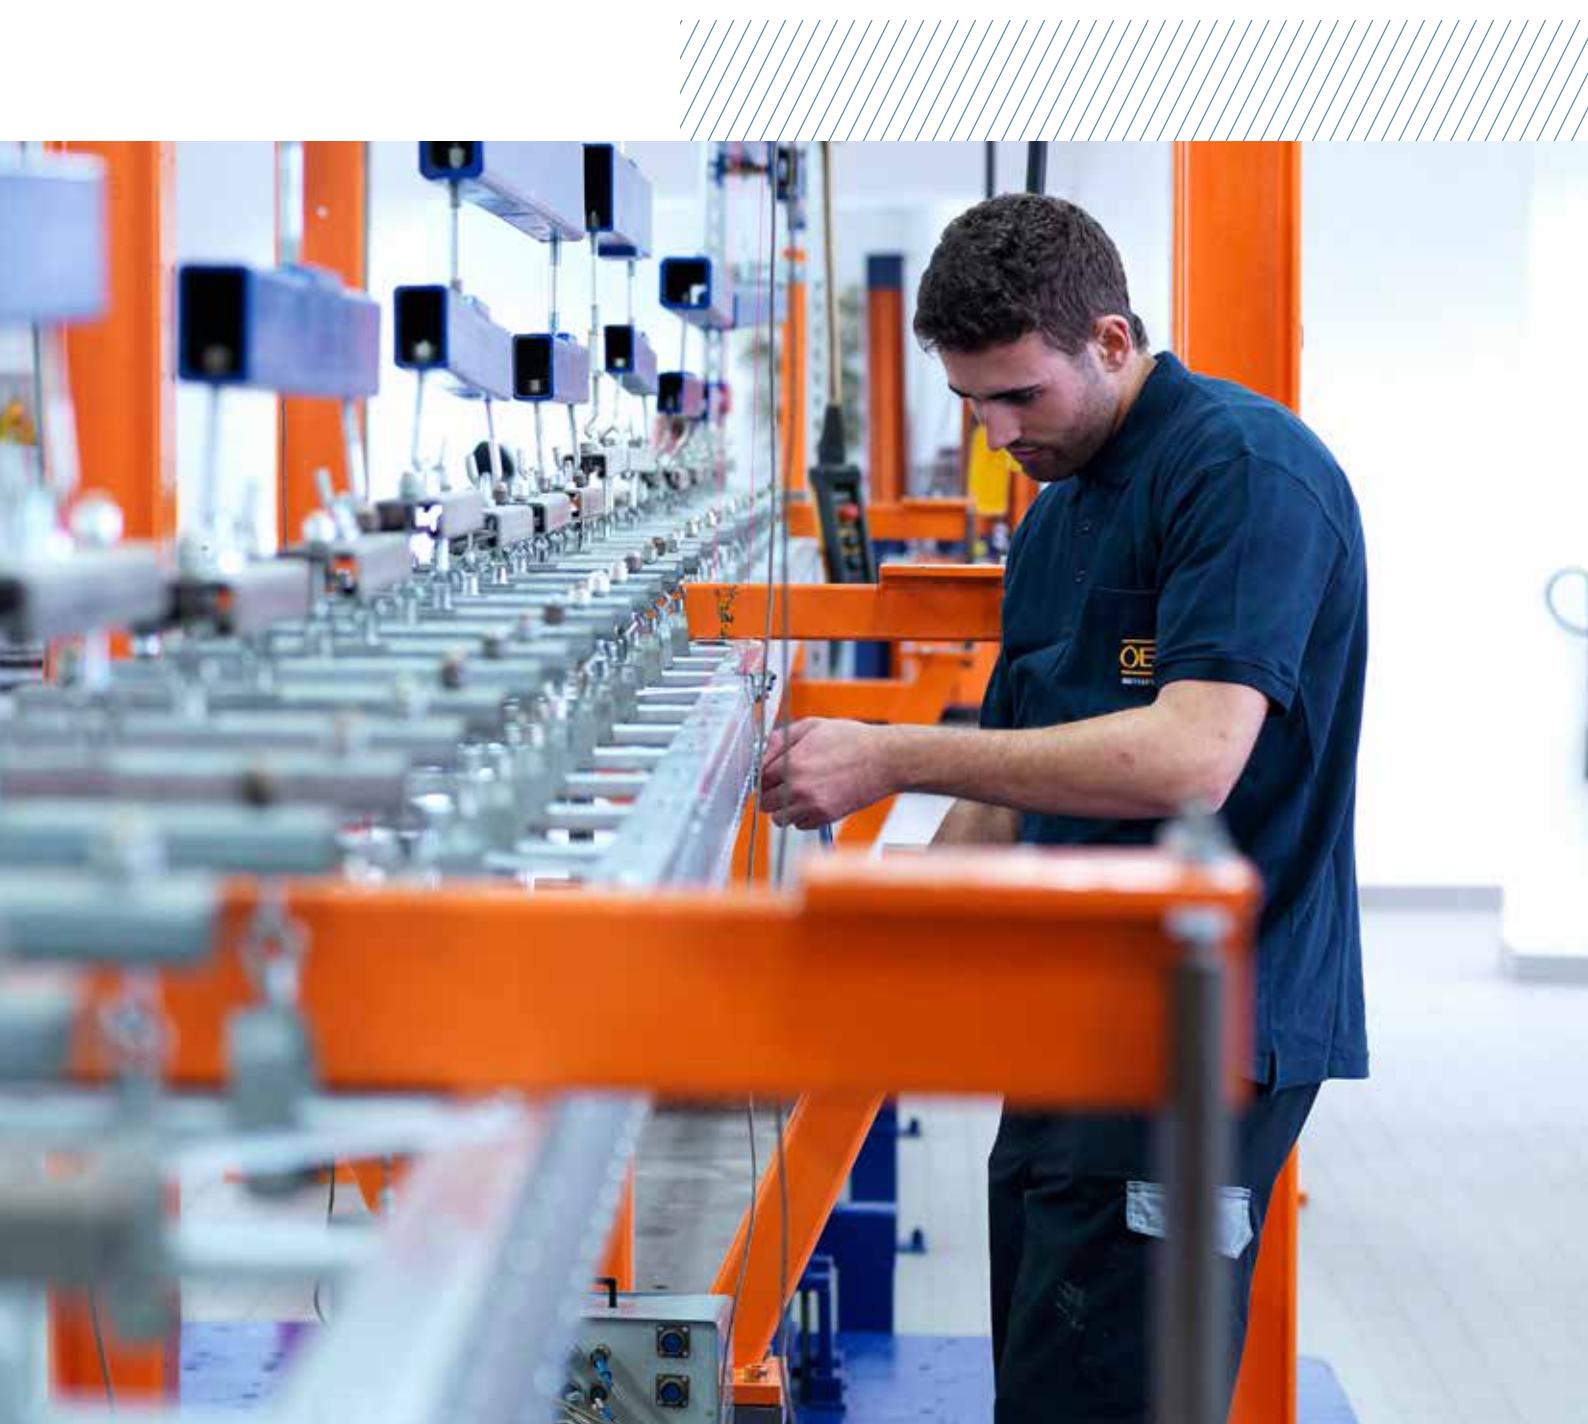

The BET Test Centre

In the in-house BET Test Centre, OBO simulates the loads which the cable ladder system must withstand continuously. We determine the maximum load capacity and carrying capacity of the system, as well as its resistance to corrosion. We are able to prove standardised testing of EMC properties using test reports. In other words, OBO places paramount importance on safety.

KTS testing system

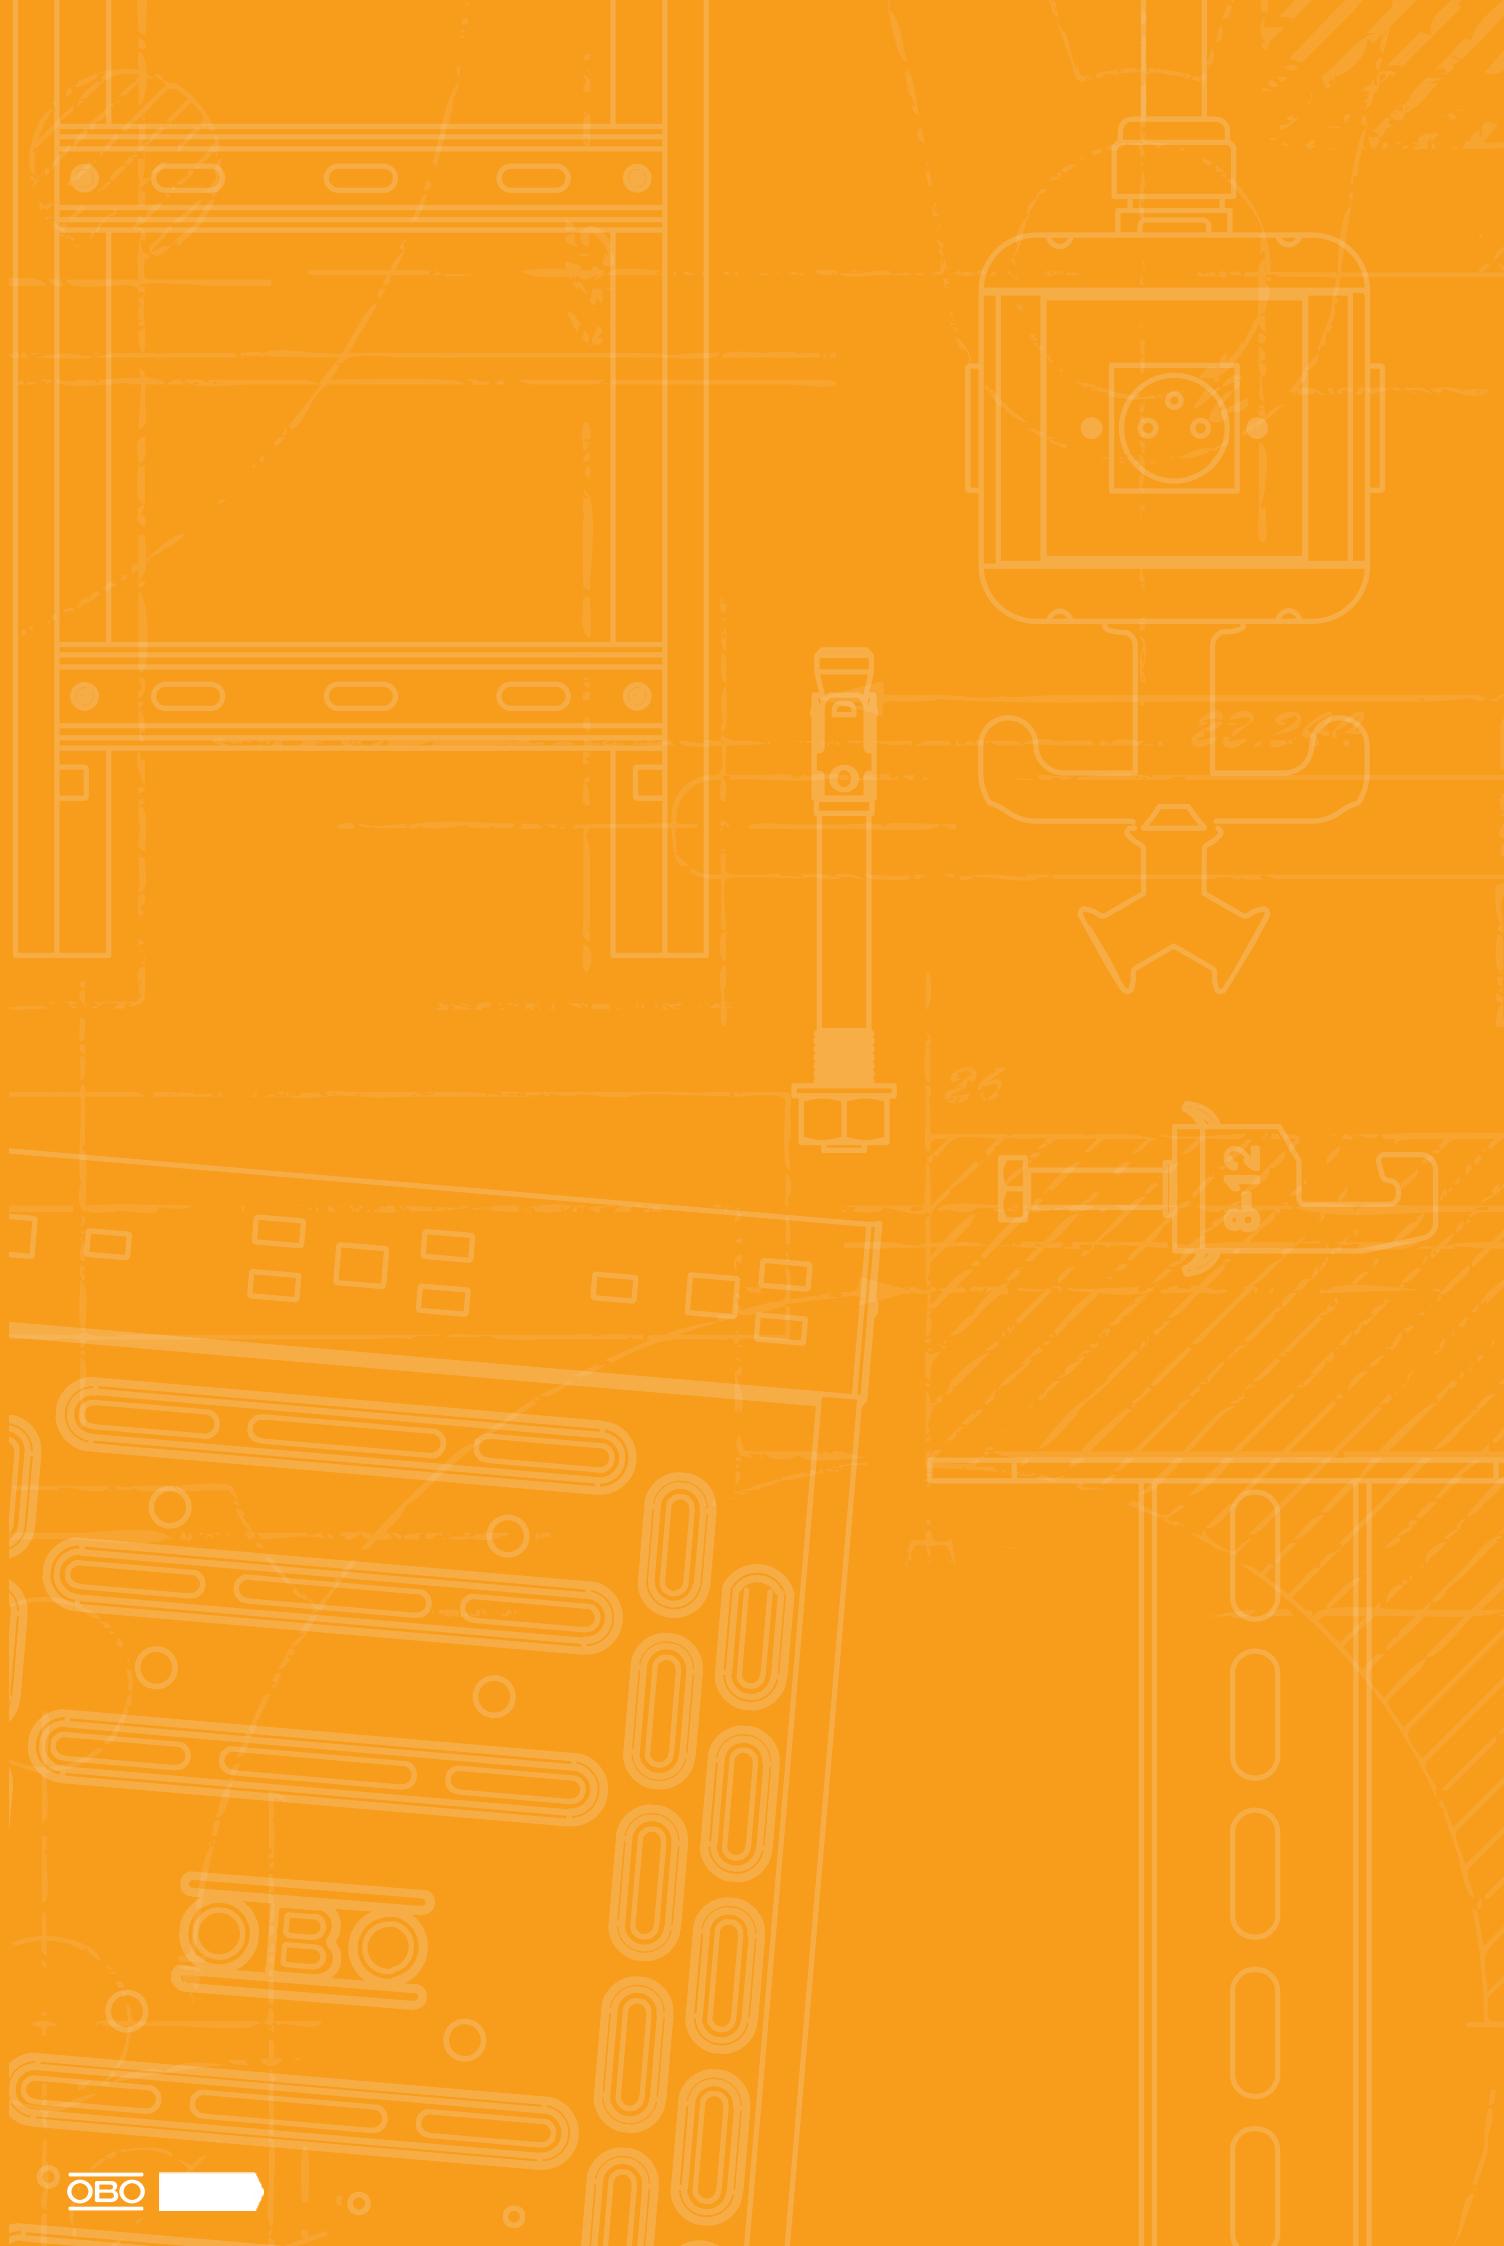

The KTS testing system was specially constructed for the testing of OBO Bettermann cable support systems. Thanks to its continuous further development and adaptation to the latest requirements, it can offer comprehensive testing options. For example, the tests required by DIN EN 61537 can be carried out. Here, a safe working load (SWL) is proven, which represents the reliable stability of the systems.

Cable ladder systems

OBO

Riveted cable ladder systems

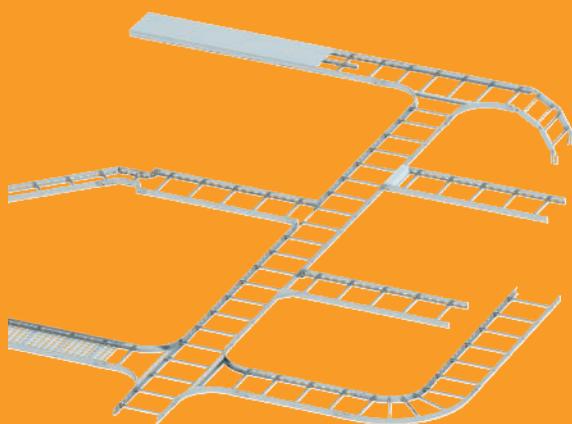

The high load capacity and good ventilation of the OBO cable ladder systems can offer tangible benefits, in particular during the installation of power cables. OBO Bettermann's cable ladder systems can be used universally and, due to the continuous rail and rung perforation, can offer countless installation benefits. A factor guaranteeing easy mounting is the option of integrated fastening of cables using OBO U clamps to the rungs, which are available in various different versions.

Mounting aid

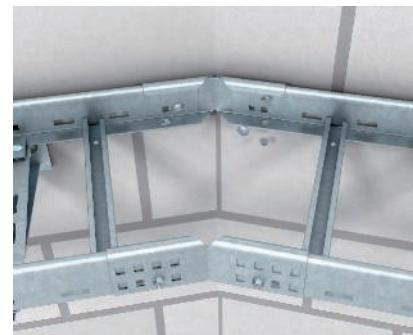

Jump application

Implementation of vertical jumps with adjustable connectors, e.g. for ceiling joists.

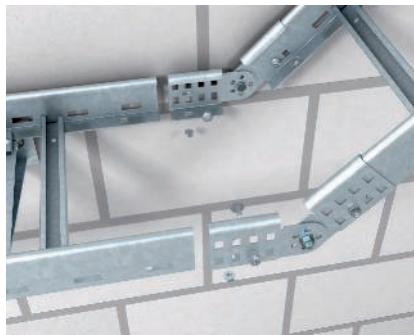

Straight connection of cable ladders

Straight connection of cable ladder with straight connector, type LGVG.

Horizontal angle connection of cable ladders

Horizontal angle connection with straight and angle connectors, type LWVG.

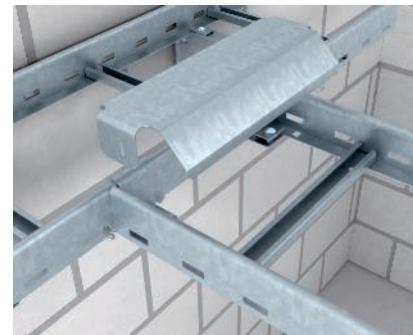

Vertical angle connection of cable ladders

Creation of a vertical angle connection using adjustable connectors, type LGVG.

Installation of tee

Creation of a horizontal tee exit of two cable ladders at different heights. The support angle, type LAW, is required to fix two cable ladders.

Tee with support plate

Creation of horizontal tees for cable ladders running at the same height. To increase the cable supporting surface and to protect the cables, use support plates, type LABL. Additional supports should be planned for the area of the exits.

Vertical cable exit

The exit plate, type LAB, is used to increase the cable supporting surface for vertically exiting cables and as cable protection.

Screwless barrier strip fastening

Screwless fastening of a barrier strip in cable ladders with hold-down clamp, type KS KL.

Screwed barrier strip fastening

Screwed mounting of the TSG barrier strip through the perforated rung of the cable ladders.

Straight barrier strip connection

Screwless straight connection of barrier strips in cable ladders using the barrier strip TSGV.

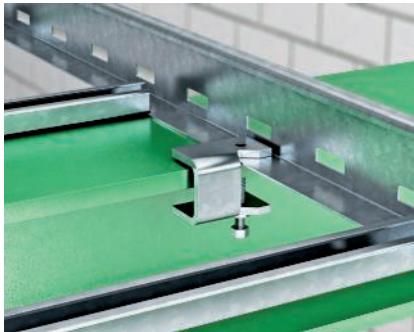

Installation of insert plate

Installation of insert plates, type ELB-L.

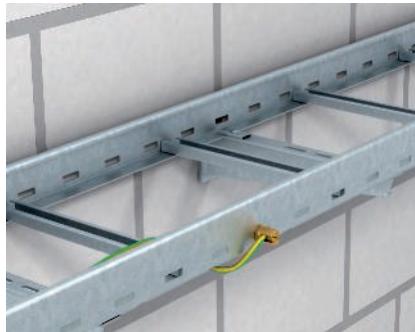

Cover mounting

Covers for cable trays and cable ladders can be extended to a locking cover using the cover clamp DK DRLU A2.

Cable ladder hold-down clamp

Cable ladder hold-down clamp KLL for direct mounting of cable ladders to steel girders.

Earthing terminal/earth connection

Earthing terminal for fastening the equipotential bonding wire to the cable support system.

Mounting aid

Adjustable vertical bend

Adjustable bend from adjustable bend elements of the type LGBE with adjustable connector for the bridging of height offsets.

Tee

Creation of a one-sided branch with a tee of the type LAA.

Add-on tee, symmetrical

Mounting two add-on tees, type LAA, on a cable ladder as symmetrical cross-over.

Mounting of a tee

Mounting of a tee of the type LT to create a one-sided branch for cable ladders.

90° bend

Connection of two cable ladders at a horizontal 90° angle with a bend, type LB 90.

Multifunctional connector for cable ladders

Creation of a reduction, including 45° angle, using a multifunctional connector, type LMFV.

Multifunctional connector for cable ladders

Creation of a reduction, including 45° angle, using a multifunctional connector, type LMFV.

Vertical ladder systems

OBO vertical ladder systems for vertical routing of all kinds of cables. Available as light-duty vertical ladders with a side height of 45 mm, as a heavy-duty vertical ladder with U profiles and industrial vertical ladders with I profiles. Both the heavy-duty and industrial vertical ladders can be assembled in variable lengths.

Vertical ladder systems

Installation principle

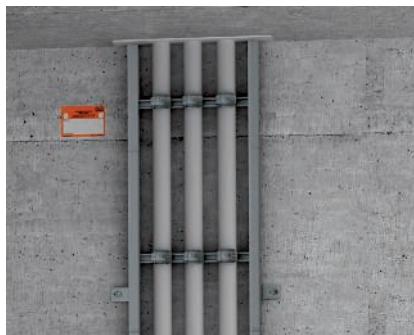

- | | |
|----------|----------------------------------|
| 1 | Light-duty vertical ladder |
| 2 | Heavy-duty vertical ladder |
| 3 | Industrial vertical cable ladder |
| 4 | Cover with spacer |
| 5 | Rung seat with MS4022 rung |

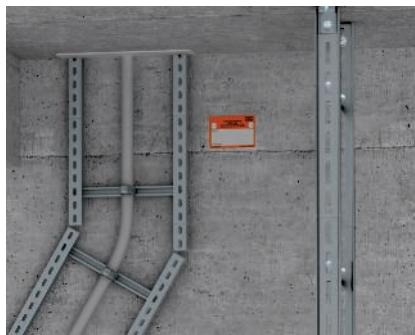

Mounting aid

Wall mounting application

Wall mounting of a vertical ladder with mounting angles.

Change of direction application

Implementation of a change of direction with heavy-duty vertical ladder, type SLM.

Free-standing vertical ladder application

Mounting example for free-standing industrial vertical ladders, type SLS, fastened to the ceiling and floor.

Straight connection of vertical ladders

Connection of vertical ladders, types LG and SSL 60, with connectors, type LVG.

Angle connection of cable ladders

Creation of flexible vertical ladder angles with angle connector, type LWVG.

Adjustable connection of cable ladders

Creation of flexible vertical ladder angles with adjustable connector, type LGVG.

Wall mounting, light-duty vertical ladder

Wall mounting of light-duty vertical ladder, type SLL 45, with wall bracket, type WB 30/75.

Direct wall mounting

Direct fastening of the vertical ladders LG and SSL with anchor bolts on the wall.

Wall mounting, heavy-duty vertical ladder

Wall mounting of heavy-duty vertical ladder, type SLM 50, with mounting angle, type BW.

Vertical ladder mounting on steel

Installation of the heavy-duty vertical ladder, type SLM 50, with cantilever beam made of U profile, on a steel construction.

Cable fastening with U clamp

Fastening of cables to the rung with clamp clips.

Fastening of industrial vertical ladder

Wall mounting of industrial vertical ladder with mounting angle, type BW 80/55.

**Fastening of C profile rung**

Fastening of C profile rung, type CK 40, in industrial vertical ladders, type SLS 80.

**Fastening of angle rung**

Fastening of the angle rung, type WSK 40, in industrial vertical ladders, type SLS 80.

**Ceiling fastening**

Fastening of an industrial vertical ladder, type SLS 80, to the ceiling using mounting angle, type BW.

**Illustration of vertical shaft**

Illustration of complete vertical ladder mounting.

**Rung seat fixed to IS 8 support**

Fastening of the rung seat, type SA, with profile rail, type MS 4022, in I support.

**Rung seat in steel girder**

Direct fastening (clamping) of the rung seat, type SAA, with profile rail, type MS 4022, on steel girder.

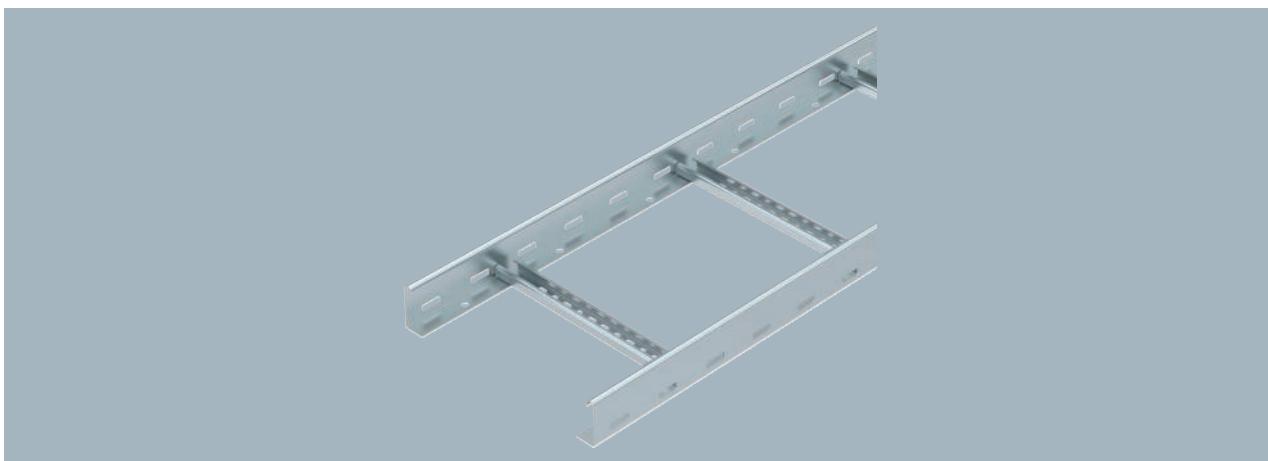

**Cover mounting, vertical**

Installation of the cover with spacer on a vertical ladder.

LGVG 60 A2	60			
LGVG 60 A4	60			

Adjustable connector as external connector to join cable ladders and fittings with a side height of 60 mm and continuous rail perforation. Angle can be adjusted vertically.

The bolt fastening ensures the continuity of the equipotential bonding.

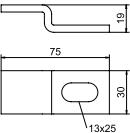

Wall bracket

Type	Pack Piece	Weight kg/100 pc.	Item no.
WB 30 75 FT	10	18.100	6019617

Wall bracket for the fastening of light-weight vertical ladders type SLL, to concrete walls and masonry.

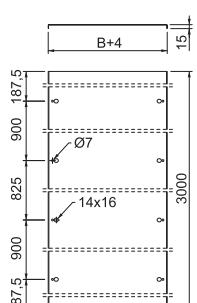

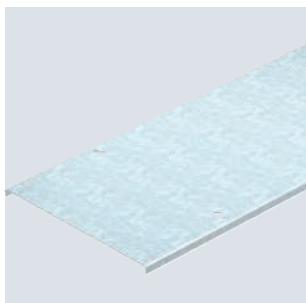

Wall bracket

Type	Pack Piece	Weight kg/100 pc.	Item no.
WB 30 75 A2	10	18.000	6019668

Wall bracket for the fastening of light-weight vertical ladders type SLL, to concrete walls and masonry.

Cover for stand-off mounting

Type	Width mm	Thickness mm	Length mm	Pack m	Weight kg/100 m	Item no.
